

EVO-CRETE™ *Lightweight Utility Products* *'Concrete is History!'*

EVO-CRETE is a cellular mix creating a dynamic cellular structure with fibre reinforcing to provide extreme strength and durability

EVO-CRETE replaces inferior heavy concrete and non-structural polystyrene fillers

Lightweight design reduces Occupational Health and Safety manual handling risks associated with heavy concrete

Impact resistant = reduced freight and transport damage

Fire proof / non-combustible

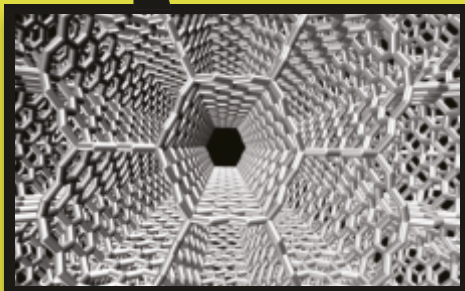

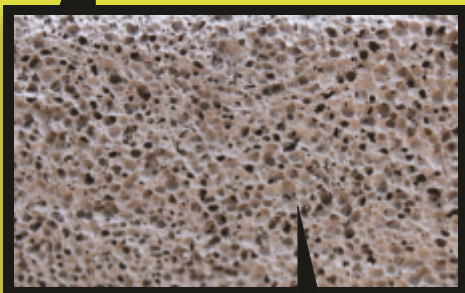

Bolts like concrete and drills like plaster

Chemical resistant

100% made in Australia

3 times lighter than concrete!

Strong • Lightweight • Eco-Friendly

Advanced Design

EVO-CRETE products represent the highest level of engineering technology and set the new standard for ultra lightweight concrete products. Derived from extensive research and development, **EVO-CRETE** technology has a long history of demonstrated success across a variety of industries. The **EVO-CRETE** product range delivers superior strength to weight properties, durability and quality over the current heavy concrete and polystyrene filled products on the market today.

Product Applications

- Air Conditioners
- Hot Water Systems (Gas, Electric and Heat Pump)
- Gas Bottles
- Pumps & Filter Equipment
- Generators
- Garden Edging
- Pavers & Blockwork

Green Benefits of EVO-CRETE

- Concrete alone accounts for 5% of the global carbon footprint
- EVO-CRETE uses less cement to produce a superior product
- Product earns green building credit points
- Using EVO-CRETE is just another step towards reducing waste and helping the environment.

Product Test Specifications

TEST	METHOD	RESULTS
Fire spread and burning	ASTM E84	No flaming after last 14mins 30sec
Alkaline resistance of fibres	ASTM C2258-88	99.8% strength retained
Scaling resistance to de-icing chemical	ASTM C672-92	No weight loss
Compressive stress	ASTM C3986	577psi (28 days)
